Market comment

May was generally a positive month for equities, although with dispersed returns across regions and sectors. US Treasuries sold off slightly in anticipation of a potential rate rise in June. Gold declined by more than 6% during the month.

The EPP Strategy lost 1.10% in May, bringing the YTD return to 1.15%. Gold contributed -1.64% to the overall negative return. Strategies in equities (+0.34%) and Treasuries (+0.20%) contributed positively, although performance was not strong enough to offset the losses in the gold strategy. This was mainly due to the strenghtening USD (2.8%) against the EUR that had a detrimental effect on the non-USD equity exposures in the portfolio, rather than the local asset level performance.

Going into June, the models added the US technology sector strategy, exited Treasuries and rebalanced within the equity allocations. The gold allocation remained unchanged. The currency strategy was also added back to the portfolio.

Investment strategy

The strategy pursues a quantitative, rule-based investment process that adaptively allocates between stocks, bonds, commodities and cash instruments on a monthly basis to achieve a robust risk/return profile. Each of the asset classes is optimized individually applying a range of proprietary trading and allocation rules. Cross-correlations of instruments and asset classes are accounted for to achieve a significantly lower overall portfolio volatility.

Amongst the methodologies applied are various ranking and rotation algorithms across sectors, industries, markets and asset classes globally. The methodologies deployed have been thoroughly tested across a broad set of economic conditions. The strategy is designed as a diversified all-weather multi-asset strategy generating robust performance while mitigating downside risk during severe market crashes.
